What is ISO 13485:2003?

OHSAS 18001:2007 is the Internationally Recognized Standard for Occupational Health and Safety (OHS) Management Systems

The standard provides a framework for organizations, regardless of their complexity or size, to holistically manage their occupational safety and health hazard. The OSHAS 18001 is designed to enable organizations to demonstrate their commitment towards providing a safe and efficient working environment by identifying and understanding their OHS risks and by improving upon their performance by actively managing these activities.

The OHSAS 18000 family of series is the emerging standard set for managing occupational safety and health. It consists of two publications most notably OHSAS 18001; this is the "Occupational Health and Safety Management Systems Specification". It was developed in response to demand for a recognized standard against which occupational safety management systems can be assessed. Other standards included in the series are OHSAS 18002, which provides guidelines for the implementation of OHSAS 18001 and explains the requirements and progressive steps towards implementation/registration.

The rationale behind OSHAS 18001 is to continuously minimize occupational hazard risk in the workplace, which in turn improves company productivity.

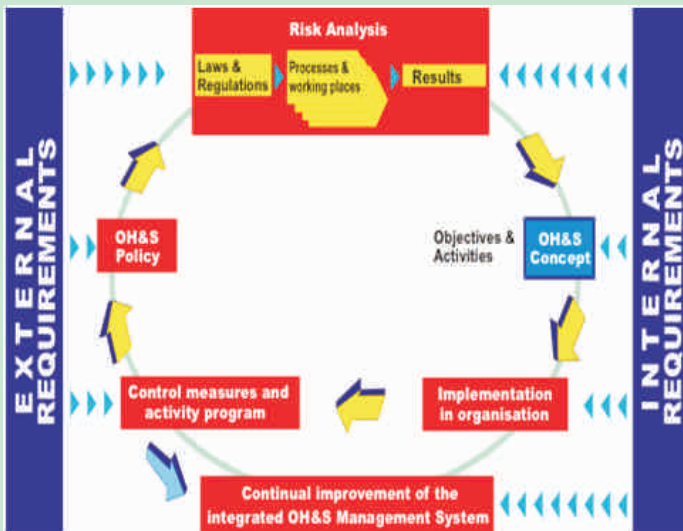

Providing OHSAS 18001 consulting,
Training and Certification
facilitation services across the world.

BENEFITS OF OHSAS 18001:2007

SUMMARY OF OSHAS 18001:2007

The enormous price of human life, human health, social disruption, and ecological damage has threatened the business occupational health and safety management because of the increased exposure to various hazards through modern technology. The purpose of occupational health and safety management is to safeguard the occupational health and safety of employees.

The OHSAS 18001:2007 provides industry with requirements for managing organization's occupational health and safety systems so as to reduce health and safety risks resulting from its business operation. It can be adopted by any organization wishing to implement a formal procedure to reduce the risks associated with health and safety in the workplace for their employees, customers and the general public.

Broadly, an ideal OHS management system (OHSMS) should provide a structured process to minimize potentials of work-related injuries and illnesses, increase productivity by reducing the direct and indirect costs associated with accidents, and increase the quality of manufactured products and/or rendered services. In order to implement OHSMS, an organization requires to:

- Plan and integrate concepts of hazard prevention, meet statutory, regulatory and policy requirements, develop OHS goals and objectives, and establish OHS management programme.
- Implement the OHSMS, prioritizing the use of OHS resources, defining the structure and responsibility of personnel, establishing documentation of the core system elements and its interaction, including procedure for controlling documents and data.
- Evaluate, monitor and control OHS hazards through corrective and preventive actions
- Undertake management review to monitor progress of OHSMS implementation
- It must provide a direction to OHS activities, in accordance with the organizational policies, regulatory requirements, industry practices and standards, including negotiated labour agreements. Therefore, conforming to an OHSMS may be of significant value to an organization.

Therefore, the implementation of occupational health and safety management system has become an important policy-making tool for all sectors of the business in order to take efforts to build a sustainable society in the most cost-effective possible manner.
